

GRAVES

CONSTRUCTION & DRILLING SERVICES, INC.

“ Wasp’s inventory management solution really makes keeping up with stock easy. ”

– *James Hart, Assistant Project Manager, Graves Construction & Drilling Services*

The Client:
Graves Construction
& Drilling Services, Inc.

Founded in 1990, Graves Construction & Drilling Services, Inc. (Graves) offers a variety of specialized services in the disciplines of site remediation, underground utility installation, and heavy construction. Graves maintains licenses in five states through the southeast as a Licensed General Contractor. Graves offers lump sum bidding, cost plus contracts, or negotiated pricing for all of their clients.

The Challenge

Prior to considering an inventory management solution, the company was manually tracking all of their excess building materials after each job. This process proved to be tedious, time consuming, and inaccurate.

The Solution

The company's assistant project manager, James Hart, researched options to help streamline their operations. After careful consideration, he chose an [inventory management solution](#) from Wasp Barcode Technologies.

The Result

"Wasp's inventory management solution really makes keeping up with stock easy," said Hart. "Now, keeping up with what we have in stock is as easy as opening the interface and doing a search, rather than digging through a warehouse."

In addition to enjoying the easy-to-use interface and search capabilities, Hart says the company benefits from the ability to filter locations and items by description. "The ability to filter locations is a real relief with as much as we have in stock," said Hart.
